

## 15-122: Principles of Imperative Computation, Spring 2025

## Programming Homework 0: Sample

Due: Now!

Welcome to 15-122! This UNGRADED sample programming homework is designed to help you learn the flow of getting, completing, and submitting programming assignments.

See the directions in the setup lab writeup for how to complete the assignment.

As noted in setup lab, there are two ways to submit. You can use the **handin** command:

```
% autolab122 handin sample factorial.c0 favorite_number.c0
```

After some time, it displays your scores for this submission. For additional feedback, run

```
% autolab122 feedback
```

Your submission can also be made through the web interface of [Autolab](#). To do so, please create a zipped tarball (**tgz**), for example:

```
% tar -czvf handin.tgz factorial.c0 favorite_number.c0
```

and then upload the file **handin.tgz** to [Autolab](#). You can see scores and feedback there as well.
